Claims:

This listing of claims will replace all prior versions, and listings, of claims in the application.

Listing of Claims:

1.   (Withdrawn) An internet-based method for a service to chronically connect a remote patient to a database network for medical device data exchange and review comprising:

providing a web-site having a user interface wherein the user interface includes a secure sign-in input to access the database network site;

receiving at the web-site inputs associated with a specific medical device and patient;

confirming the identity of the medical device and the patient; and

enabling the patient to access the database to use the service.

2.   (Withdrawn) The method of claim 1 wherein the medical device data exchange and review further comprises at least one of the processes of:

uploading the medical device data into the database; and

accessing the medical device data in the database via a secure web site.

3.   (Withdrawn) The method of claim 1 wherein said website includes a proxy right access scheme to provide privileged access to a patient's data by friends and family.

4.   (Currently amended) An internet-based method for a service to enable a medical practitioner to access a secure web-site to patient data and respond to a notification of an event relating to a condition of a remote patient having an implanted medical device, the method comprising:

receiving data indicative of the event from the implanted medical device indicative of the event condition;

alerting the medical practitioner to the event condition using an event service; and

enabling the medical practitioner to execute secure access to the a patient's database in a single sign-on action through a web-based site having secure sign-in access to the patient's database in accordance with a prescribed protocol.

5.   (Original) The method of claim 4, wherein said single sign-on action includes authentication to a foreign web-site that is passed over to access the secure patient database.

6.   (Currently Amended) An internet-based method for a service to enable a physician to access a rendered page about conditions of a patient generated at least in part from data collected from an implanted medical device within the patient, the method comprising:

alerting the physician about the patient's condition; and

allowing the physician to access a patient's database and wirelessly pull up a page so that the physician's receipt of a report summarizing the patient's condition is confirmed, wherein physician access is through a web-based site having secure sign-in access to the patient's database is in accordance with a prescribed protocol.

7.   (Currently Amended) The method according to claim [[7]] 6 wherein a patient management network includes the ability to push out the fully rendered page containing patient information and device information to wireless devices and is represented as a

complete page replicating a presentation similar to a website page display.

8.   (Previously Presented) The method according to claim 6 wherein said wireless pull-up includes implication of one of a MICROSOFT pocket PC technology and equivalent.

9.   (Original) The method according to claim 6 wherein the physician can transcribe a voice message back to the patient and can optionally copy the message to other professionals.

10.   (Currently Amended) The method according to claim 9 wherein the patient is notified about the physician's message upon [[the]] a patient's home connect receiving the message.
